Ribbon cut as new Class 100 (ISO 5) cleanroom upgrade opens

Following a period of rapid growth for its cleanroom re-packed products, CES has completed the upgrade of its re-packaging facility to a full class 100 (ISO 5) cleanroom. The investment has given the company a significant increase in operating capacity to provide a bespoke service to customers who require cleanroom consumable products in a non-standard configuration. This can be either a customised pack quantity and/or multiple bagging and also include a sterilisation service through gamma irradiation. The CES facility is fully audited and provides for batch traceability in addition to being ISO9001 2008 quality accredited. The Executive team at CES are confident that the new facility will provide significant added value to existing customers in addition to attracting new customers looking for a cost effective high quality re-pack service.

CES launch range of Diversey Clearklens Sterile Disinfectants

CES are delighted to announce the launch of a partnership with Johnson Diversey to supply the ClearKlens range of sterile/non-sterile disinfectants and biocides. The ClearKlens range of products provide a number of benefits:

- Trigger spays incorporate anti-suck technology
- Protected Formulations
- Products manufactured to GMP with full batch traceability.
- Disinfectants supported through the Biocidal Product Directive (BPD)

CES Sales Director Steve Hufton stated "the new trading relationship with a world renown manufacturer adds market leading sterile disinfectants to the CES product portfolio" For further information, please contact customer services on ☎ 01634 719422.
